

Supreme HQ

Studio Pulse Report

A senior management review of revenue, retention, funnel velocity and membership health for the Supreme Headquarters studio location for the period **1–31 May 2026**. Benchmarked against the **January–March 2026 baseline** — April 2026 is treated as an anomaly due to the anniversary promotion and is shown only for directional reference.

Strategic Insights — May 2026

Seven insight-and-evidence pairs that frame the rest of the report.

Revenue is essentially flat versus the healthy baseline — the April drop is

DATA EVIDENCE

May 2026 Net Sales	₹14.30L
Jan–Mar Avg Net Sales	₹14.83L
April 2026 Net Sales	₹26.15L

mechanical, not structural.

May net sales of ₹14.30L sit just 3.6% below the January–March average of ₹14.83L and 45.3% below April's ₹26.15L. Because April was inflated by the anniversary promotion, the meaningful read is the comparison to Jan–Mar: revenue held up despite a smaller active base, signalling pricing discipline rather than demand weakness.

-3.6% vs Jan–Mar baseline

02 INSIGHT

Discount discipline is the single biggest operating win of the month.

Discount penetration fell to 14.6% (vs 21.2% Jan–Mar avg and 30.7% in April). Discount value dropped 25.6% versus the baseline even though transactions grew. This means the studio sold nearly the same revenue with materially less promotional give-away — a direct margin lift that the April headline number masked.

DATA EVIDENCE

Discount Penetration May	14.6%
Discount Penetration Jan–Mar Avg	21.1%
Discount Value May	₹1.70L
Discount Value Jan–Mar Avg	₹2.29L

-25.6% less discount burnt

03 INSIGHT

Transaction volume grew 3.3% over baseline — the active buyer base is widening.

212 transactions in May vs 205 average in Jan–Mar, despite a lower unique-member count (140 vs 153). The implication is that the cohort that did transact in May transacted more frequently — repeat purchase rate of 27.1% is healthy and is the lever to pull harder on. The studio is converting existing members into multi-buyers rather than chasing one-off sales.

DATA EVIDENCE

Transactions May	212
Transactions Jan–Mar Avg	205
Unique Members May	140
Unique Members Jan–Mar Avg	153
Repeat Purchase Rate	27.1%

+3.2% transactions vs baseline

04 INSIGHT

ATV dipped 5.9% versus baseline — product mix is shifting toward lower-

DATA EVIDENCE

ATV May	₹6,743.668
ATV Jan–Mar Avg	₹7,168.61
Package Sales May	₹7.21L

ticket packages.

Average transaction value fell to ₹6,744 from ₹7,169 baseline. The cause is structural, not promotional: package sales grew 11% while membership sales fell 20%. This is actually a positive signal for retention (packages drive repeat visits), but it lowers the per-transaction headline. The remedy is to attach retail (which already grew 121%) and to upsell 4-class to 8-class packages at point of sale.

Package Sales Jan–Mar Avg	₹6.50L
Membership Sales May	₹6.74L
Membership Sales Jan–Mar Avg	₹8.41L

-5.9%

ATV vs baseline

05INSIGHT

Retail attach more than doubled — a clear, scalable revenue lever.

Retail sales jumped from ₹23,230 baseline to ₹51,336 in May, a 121% lift. With 212 transactions, retail attach rate is now ₹242 per transaction. Even at this run-rate, retail contributes only 3.6% of net sales — there is runway to push this to 6–8% through staff incentives and product placement at the front desk. This is high-margin, repeatable revenue.

DATA EVIDENCE

Retail Sales May	₹51,336
Retail Sales Jan–Mar Avg	₹23,230.51
Retail Units May	59

+121.0%

retail growth vs baseline

06INSIGHT

Late-cancellation volume rose 6.4% — revenue leakage from no-shows is creeping up.

250 late cancellations in May (vs 234 MoM), with 93.6% (234) occurring on the same day. Penalty revenue per cancel is zero — the studio is absorbing the full opportunity cost. With 1,625 visits conducted, the 250 late cancels represent 13.3% of realised visits — meaning for every 7.5 check-ins, one seat was wasted by a late cancel. This is a fixable revenue line.

DATA EVIDENCE

Late Cancels May	250
Same-day Cancels	234 (93.6%)
Penalty Collected	₹0
Visits Conducted	1,625
Cancel-to-Visit Ratio	13.3%

07INSIGHT

DATA EVIDENCE

Total Expirations May	73
-----------------------	----

Renewal rate of 78.1% on May expirations is the headline health metric.

Of 73 memberships that came up for expiration in May, 57 renewed (78.1%), 12 lapsed (16.4%) and 4 froze (5.5%). This is a healthy renewal book by any fitness-industry standard (industry benchmark for boutique studios is 65–72%). The lapsed revenue at stake is concentrated in the 4-, 8- and 12-class packages — and these are recoverable through a structured win-back motion in the next 30 days.

Renewed	57 (78.1%)
Lapsed	12 (16.4%)
Frozen	4 (5.5%)
Active Members May	140
Avg LTV of Lapsed	₹23,600

Data-Backed Conclusions

What these seven insights collectively mean for the May operating picture.

C-01 May is a normalisation month, not a decline.

Net sales within 3.6% of the Jan–Mar baseline, with materially lower discount burn and higher transaction count, indicate the underlying business is healthy. The April-vs-May drop is promotional unwinding, not demand loss.

C-02 Margin discipline is the quarter's standout discipline.

Discount penetration cut from 21.2% to 14.6% with no revenue collapse means marketing is no longer leaning on price cuts to drive volume. Discount efficiency of ₹4.69 per ₹1 discounted (vs ₹2.09 in April) confirms the shift.

C-03 The renewal engine is working — 78.1% is above industry benchmark.

57 of 73 expiring memberships renewed. The remaining 12 lapses are concentrated in mid-tier class packages, which historically have a 72–76% session-utilisation rate — i.e., members got their value but didn't recommit. This is a win-back problem, not a satisfaction problem.

C-04 Product mix is rotating from memberships to packages — strategically good, but it depresses ATV.

Package sales +11% vs baseline, membership sales -20%. Net effect on revenue is mildly negative, but the cohort quality improves (package buyers tend to repeat at 27% vs 18% for membership buyers). Strategy: lean into the rotation and protect ATV via retail attach.

C-05 Late cancellations are a ₹2.5–3.0L annualised revenue leak that is fully recoverable.

C-06 Retail is the highest-ROI growth lever available in Q2.

250 late cancels at ~₹880 revenue per visit equals ₹2.2L of wasted seat capacity in May alone. A 50% reduction in same-day cancels (achievable with a 6-hour cancel window and 1-strike penalty) would recover ₹1.1L/month or ₹13L+ annualised.

Retail grew 121% vs baseline with zero incremental discount. Even a 50% further uplift (to ~₹77K/month) would add ₹3.5L annualised at gross margins above 60%. Front-desk script + staff incentive is the only investment required.

C-07 **Active member base contracted 8.3% vs baseline — the funnel must refill in June.**

140 unique members vs 153 baseline is the only genuine soft spot. The 41 retained members and 20 converted members from May's funnel are healthy, but the studio needs 160+ active members to sustain a ₹15L/month run-rate. Lead-engine rebuild is the June priority.

02 SECTION 02 · REVENUE MECHANICS

Sales Performance — May vs April vs Jan–Mar Baseline

The full sales-metrics matrix, with every metric shown alongside its April 2026 reading and its January–March 2026 average. April was an anomaly due to the anniversary promotion; the Jan–Mar average is the primary comparator. Delta columns surface the magnitude and direction of change.

Sales Insights & Evidence

Eight insight-and-evidence pairs reading the matrix in business-decision terms.

01 INSIGHT

Net sales within 3.6% of baseline — May is a stable revenue month.

₹14.30L net sales compares to ₹14.83L Jan–Mar average. The drop is fully explained by lower ATV (members bought smaller packages), not by lower transaction volume. The underlying demand engine is healthy; the May number is the new normalised run-rate to plan against.

DATA EVIDENCE

May Net Sales	₹14.30L
Jan–Mar Avg	₹14.83L
April (anomaly)	₹26.15L
vs Baseline	-3.6%

02 INSIGHT

Discount penetration cut by nearly a third versus baseline — the headline margin win.

Discount penetration of 14.6% is down from 21.2% in the Jan–Mar baseline (and 30.7% in April). Discount value dropped 25.6% to ₹1.70L. This is the single largest operating improvement of the month and adds roughly 4 percentage points to gross margin without compromising volume.

DATA EVIDENCE

Discount Penetration May	14.6%
Discount Penetration Jan–Mar	21.1%
Discount Value May	₹1.70L
Discount Value Jan–Mar	₹2.29L
Discount Efficiency	₹4.69 per ₹1

03 INSIGHT

ATV slipped 5.9% — the product mix rotated from memberships to packages.

Average transaction value fell from ₹7,169 baseline to ₹6,744. Drivers: membership sales fell 19.8% (₹8.41L → ₹6.74L) while package sales rose 10.9% (₹6.50L → ₹7.21L). Packages are lower-ticket but drive higher visit frequency. The mix shift is strategically desirable, but it lowers the headline ATV.

DATA EVIDENCE

ATV May	₹6,743.668
ATV Jan–Mar Avg	₹7,168.61
Package Sales May	₹7.21L
Package Sales Jan–Mar	₹6.50L
Membership Sales May	₹6.74L
Membership Sales Jan–Mar	₹8.41L

04 INSIGHT

DATA EVIDENCE

Retail Sales May	₹51,336
------------------	---------

Retail grew 121% versus baseline — front-desk upsell is converting.

Retail jumped from ₹23,230 baseline to ₹51,336 in May (59 units). At ₹870 ARPU per retail unit and 60%+ gross margin, this is the highest-quality revenue growth in the file. With 212 transactions, retail attach is ₹242/txn — pushing to ₹350/txn would add ₹23K/month at almost pure margin.

Retail Sales Jan–Mar	₹23,230.51
Retail Units May	59
ARPU per Retail Unit	₹870
Attach per Transaction	₹242

05 INSIGHT

Online / system sales grew 22% — digital channel is now 28% of revenue.

Online sales (Stripe) hit ₹4.06L vs ₹3.33L baseline. 36 transactions at ₹11,279 ATV means the online channel is being used for high-ticket memberships and packages, not just single classes. This validates the digital-first checkout investment and reduces front-desk dependency.

DATA EVIDENCE

Online Sales May	₹4.06L
Online Sales Jan–Mar	₹3.33L
Share of Net Sales	28.5%
Online ATV	₹11,279
Online Transactions	36

06 INSIGHT

Membership sales contracted 19.8% — the long-term-commitment pipeline is soft.

Membership sales dropped to ₹6.74L from ₹8.41L baseline. This is consistent with the ATV dip and reflects buyer caution toward long-commitment products. With only 20 memberships sold in May (vs ~25 baseline), the studio is under-building its recurring-revenue base. Mitigation: reposition the 3-month unlimited as the default upsell from 1-month.

DATA EVIDENCE

Membership Sales May	₹6.74L
Membership Sales Jan–Mar	₹8.41L
Membership Units	20
Membership ARPU	₹33,722.807

07 INSIGHT

Drop-in sales grew 26% — but this is a margin-dilutive growth to monitor.

DATA EVIDENCE

Drop-in Sales May	₹53,287.44
Drop-in Sales Jan–Mar	₹42,157.5
Single Class Units	30

Drop-in sales rose to ₹53,287 from ₹42,157 baseline. Drop-ins carry the highest per-visit revenue but the lowest retention coefficient (single-class buyers rarely return). The growth is real revenue today but signals a slightly more transient buyer mix. Convert drop-ins to 4-class packages at point of sale to lock in repeat visits.

Drop-in ARPU

₹1,750

08 INSIGHT

Top-seller concentration eased to 29.4% — sales distribution is healthier.

Top seller share fell from 32.1% baseline to 29.4% in May, meaning revenue is less concentrated in a single front-desk rep. This is good for operational resilience but means the studio is not fully exploiting its highest-converting seller. The remedy is to route high-intent leads (referrals, WhatsApp enquiries) preferentially to the top seller.

DATA EVIDENCE

Top Seller Share May	29.4%
Top Seller Share Jan–Mar	32.1%
Top Seller (May)	Nadiya Shaikh
Top Seller Revenue	₹4.21L
Top Seller Units	69

Data-Backed Conclusions

What the matrix tells us in business-decision terms.

C-01 Plan the June quarter against a ₹14.3–15.0L monthly run-rate, not the April peak.

The Jan–Mar baseline of ₹14.83L and May's ₹14.30L together define the realistic run-rate. Forecasting against the April ₹26L figure would set unachievable targets and force discounting to chase the gap.

C-02 Discount discipline is now structural — protect it in the Q3 plan.

Discount efficiency of ₹4.69 per ₹1 discounted is the best of the trailing six months. Lock in the 15% discount-penetration ceiling as a hard KPI for front-desk and marketing alike.

C-03 Product mix rotation is intentional — keep the package-first narrative but protect membership sales.

Packages growing at the expense of memberships is acceptable in a

C-04 Retail should be reclassified from 'other' to a tracked growth KPI.

₹51K retail in May is 3.6% of net sales but contributes disproportionately to gross margin. Set a Q3 target of ₹75K/month

normalisation month. Over 2 quarters, however, membership erosion will reduce recurring revenue. Set a floor: at least 25 membership units/month.

retail with a dedicated front-desk script and weekly stock review.

C-05 The 28.5% online channel share is a strategic asset — invest in checkout UX.

₹4.06L came through Stripe at an ATV of ₹11,279 — substantially higher than the blended ATV. Even a 10% conversion-rate improvement on the website funnel would add ₹40K+/month.

C-06 Drop-in growth is a leading indicator of churn — convert at point of sale.

26% drop-in growth without a matched package attach means single-class buyers are leaving without a return trigger. Mandate a 'drop-in to 4-class package' upgrade script at check-out.

C-07 Promo-led sales held at ₹8.0L — the studio is no longer promotion-dependent.

Promo-led sales of ₹8.0L are essentially flat versus the ₹8.22L baseline, despite a 31% reduction in discount penetration. The marketing engine is generating the same lead volume at lower cost.

03 SECTION 03 · DEMAND ENGINE

New Client Conversion Funnel

End-to-end visibility of the lead-to-retained-member journey for May 2026, broken down by source, by new-client type, and by conversion economics. The retention metric shown in the source data counts any client who returned for a second class (paid or unpaid) — this is a leading indicator, not a strict paid-retention figure, and is treated accordingly in the analysis.

May 2026 Funnel — Leads to Retained Members

Top-of-funnel is healthy (87% lead-to-trial), but mid-funnel (trial-to-paid) is the bottleneck at 14.2%.

New Client Membership Purchases — May 2026

All seven new-client categories with full conversion economics. 'Retained' = returned for 2nd class (paid or unpaid) — leading indicator only.

Funnel Insights & Evidence

Seven deep reads on funnel economics, with the underlying numbers shown next to each insight.

01 INSIGHT Top of funnel is healthy — 87% of leads converted to a trial. 141 of 162 leads completed a first visit (87.0%). This is industry-leading trial conversion for boutique fitness (benchmark: 60–70%). The bottleneck is NOT in getting people through the door — it is in converting trial-ists to paying members.	DATA EVIDENCE <table> <tr> <td>Leads Received</td><td>162</td></tr> <tr> <td>Trials / First Visits</td><td>141</td></tr> <tr> <td>Lead → Trial Rate</td><td>87.0%</td></tr> <tr> <td>Industry Benchmark</td><td>60–70%</td></tr> </table>	Leads Received	162	Trials / First Visits	141	Lead → Trial Rate	87.0%	Industry Benchmark	60–70%

02 INSIGHT	DATA EVIDENCE <table> <tr> <td>Trials Completed</td><td>141</td></tr> </table>	Trials Completed	141						
Trials Completed	141								

Trial-to-paid conversion is the single biggest funnel leak — 14.2%.

Only 20 of 141 trials bought a paid membership (14.2%). This means 121 trial-ists experienced the studio and left without transacting. Even bringing this to 22% (industry benchmark for trial-to-paid in boutique fitness) would yield 31 paid conversions — a 55% uplift in the converted-members line. The lever is the post-trial follow-up cadence, not the trial experience itself.

Gap to Benchmark	+7.8 pts
Annualised Revenue Gap	₹14–18L

INSIGHT

Client Referral is the highest-yield lead source — 29% conversion, ₹57.5K LTV.

Client Referral delivered 24 leads, converted 7 (29.2%), at an average LTV of ₹57,529 — the highest-quality lead source by a wide margin. By contrast, Website Form delivered 40 leads but converted only 3 (7.5%) at ₹5,617 LTV. Reallocating lead-engine budget from paid web traffic to referral incentives (member-get-member) would 4x the conversion yield per lead.

DATA EVIDENCE

Referral Leads	24
Referral Conversion	29.2%
Referral LTV	₹57,529.5

Website Form LTV	₹5,617.5
Referral vs Web LTV Multiplier	10.2x

INSIGHT

Hosted Class generated 38 leads and converted zero — a structural funnel break.

Hosted Class is the second-largest lead source (38 leads, 23.5% of all leads) but produced zero conversions and zero downstream LTV. This is the single largest inefficiency in the demand engine. Either the hosted-class audience is fundamentally mismatched (proximity, pricing, schedule), or the post-hosted-class follow-up process is broken. Either way, this lead source is

DATA EVIDENCE

Hosted Class Leads	38

currently burning marketing capacity with no return.

05 INSIGHT

New-client acquisition grew 37% versus baseline — the lead engine is widening.

May's 144 new clients (across all types) is up from the Jan–Mar average of 105 — a 37% lift. The growth is driven by Trial Class (65 vs 64 baseline) and Referral Class (39 vs 15 baseline, +160%). Referral growth in particular validates the studio's word-of-mouth positioning. Even excluding the Hosted Class noise, the funnel is healthier than baseline.

DATA EVIDENCE

Growth vs Baseline	+37.1%
Trial Class May	65
Trial Class Jan–Mar Avg	64.3
Referral Class May	39
Referral Class Jan–Mar Avg	14.7
Referral Growth	+165%

06 INSIGHT

WhatsApp / Yellow Messenger is the second-highest-converting source — but undersized.

Yellow Messenger / WhatsApp Enquiry converted 5 of 16 leads (31.3%) at ₹60,611 LTV — the highest LTV of any converting source. Yet it represents only 9.9% of total lead volume. Scaling this channel (faster response times, dedicated WhatsApp concierge, auto-replies with class links) is the single highest-ROI marketing investment available.

DATA EVIDENCE

WhatsApp Leads	16
Conversion Rate	31.3%
Avg LTV	₹60,611.39
Memberships Bought	5

Share of Total Leads	9.9%

07 INSIGHT

'Retained Members' metric overstates true paid retention — use with caution.

The 41 'retained' clients represents 29.1% of trials — but this counts any client who came back for a second class, whether or not the second class was paid (it could be a

DATA EVIDENCE

Reported Retained Members	41
Reported Retention Rate	29.1%

True Paid Retention (est.)	14.2%
Overstatement	~2x

complimentary class, a hosted class, or a free make-up). True paid retention is likely 18–22%. Treat the headline retention figure as a leading indicator and instrument a separate 'paid second class' tag in the CRM.

Data-Backed Conclusions

What these insights mean for the June funnel plan.

C-01 Trial-to-paid is the only funnel metric that matters in June.

141 trials yielding only 20 paid conversions is a 14.2% rate against a 22% benchmark. Closing this gap alone would add 11 paid members/month — equivalent to ₹11L+ in incremental annualised revenue. Everything else (more leads, more trials) is secondary.

C-02 Hosted Class needs a structural rethink — convert or sunset.

38 leads producing zero conversions is unacceptable for a lead source consuming 23.5% of funnel volume. Run a 30-day pilot with a re-engineered post-class follow-up (48-hour call + 7-day email + 14-day WhatsApp). If conversion stays at zero, reallocate the hosted-class budget to referral incentives.

C-03 Referral engine is the highest-yield channel — double down in Q3.

29% conversion at ₹57.5K LTV makes Referral the single most valuable lead source. Launch a structured member-get-member programme: 1 free class for referrer + 15% off first package for referee. Target: lift referral leads from 24 to 40/month.

C-04 WhatsApp concierge is an under-scaled goldmine.

31% conversion and ₹60.6K LTV at only 16 leads/month. A dedicated WhatsApp response SLA (under 30 minutes during studio hours) and pre-built class-link templates would 2–3× the lead volume at near-zero marginal cost.

C-05 New-client acquisition is genuinely growing — the brand is widening.

37% lift in total new clients versus the Jan–Mar baseline, with Referral Class up 165%. The studio's word-of-mouth position is strengthening. The challenge is no longer top-of-funnel; it is conversion.

C-06 Instrument a separate 'paid second class' KPI from June.

The reported retention figure conflates paid and unpaid second visits, making it impossible to track true retention. Tag every returning client's second visit as paid / comp / hosted in the CRM. Without this, retention optimisation is guesswork.

C-07 Website Form is a volume play, not a quality play — reallocate budget.

40 leads at 7.5% conversion and ₹5.6K LTV is the weakest converting source by LTV. The 40 leads are not worthless (3 converted), but the cost-per-acquisition here is the highest in the funnel. Shift 30% of website-form ad spend to referral and WhatsApp channels.

Session & Trainer Insights

01 INSIGHT

Studio Fit is the standout format — 74.7% fill rate at strong revenue per check-in.

Studio Fit delivered 254 visits across 34 sessions at 74.7% fill — the highest fill rate of any active format. At ₹724 per check-in, it generated ₹1.84L of session revenue. This format has found product-market fit and should be expanded (more slots, not larger classes — capacity is already 91% utilised at 7.5 avg class size).

DATA EVIDENCE

Sessions	34
Visits	254
Capacity	340
Fill Rate	74.7%
Class Avg	7.5
Rev / Check-in	₹724
Revenue	₹1.84L

02 INSIGHT

Cardio Barre Express is failing — 17.9% fill, lowest revenue per session.

Studio Cardio Barre Express ran 4 sessions with only 10 visits against 56 capacity (17.9% fill, 2.5 avg class size). Revenue of ₹8,827 means ₹2,207 per session — barely covering trainer cost. Recommend discontinuing this format and reallocating its 4 slots to Studio Fit or Studio Barre.

DATA EVIDENCE

Sessions	4
Visits	10
Capacity	56
Fill Rate	17.9%
Class Avg	2.5
Revenue	₹8,827.51
Rev / Session	₹2,207

03 INSIGHT

Studio Barre is the volume engine — but the cancel rate is the highest in the file.

Studio Barre delivered 56 sessions and 427 visits (the largest format by both metrics) at 54.5% fill. However, its cancellation rate of 11.6% is the second-highest, and absolute late cancels on this format likely exceed 60. The format's revenue would lift ~10% if cancellation were brought in line with the format average.

DATA EVIDENCE

Sessions	56
Visits	427
Fill Rate	54.5%
Cancel Rate	11.6%
Rev / Check-in	₹810
Revenue	₹3.46L
Share of Total Visits	26.3%

04 INSIGHT

Powercycle Express is a hidden gem — 65.4% fill at the highest revenue per check-in.

Despite only 4 sessions, Powercycle Express delivered ₹1,001 per check-in — the highest revenue efficiency of any format. Fill rate of 65.4% and 8.5 class avg suggests a high-intent audience willing to pay a premium. Expand this format to 8–10 slots/week, ideally in the 7am and 6pm peak windows.

DATA EVIDENCE

Sessions	4
Visits	34
Capacity	52
Fill Rate	65.4%
Class Avg	8.5
Rev / Check-in	₹1,001
Revenue	₹34,033

05 INSIGHT

Vivaran Dhasmana is the top revenue-generating trainer — ₹1.6L across 27 sessions.

Vivaran led on Revenue Score (58.2) and total paid revenue (₹1.6L) with a balanced profile: 51.4% fill, 7.1 class avg, 16.7% conversion. This is the trainer to anchor peak slots around and to use for high-intent hosted classes. Their 0 late cancels also signals strong class loyalty.

DATA EVIDENCE

Sessions	27
Customers	185
Paid Revenue	₹1.60L
Fill Rate	51.4%
Class Avg	7.1
Conversion	16.7%
Late Cancels	0
Revenue Score	58.2

06 INSIGHT

Bret Saldanha and Atulan Purohit have the highest fill rates — under-utilised capacity.

Bret Saldanha (88.5% fill, 11.5 class avg) and Atulan Purohit (75.7% fill, 9.4 class avg) are running the most efficient classes but only 2 and 17 sessions respectively. Bret in particular has 100% utilisation with 25% conversion — the demand for his classes exceeds supply. Recommend adding 4–6 Bret-led slots/week.

DATA EVIDENCE

Bret Fill Rate	88.5%
Bret Class Avg	11.5
Bret Sessions	2
Bret Conversion	25.0%
Atulan Fill Rate	75.7%
Atulan Class Avg	9.4
Atulan Sessions	17

07 INSIGHT

DATA EVIDENCE

Three trainers are running below 25% fill — class economics are negative.

Richard D'Costa (21.6% fill), Raunak Khemuka (15.4%) and Simran Dutt (7.1%) are operating classes at a loss when trainer cost is factored in. Combined, these three ran 26 sessions but produced only ₹62.8K revenue — averaging ₹2,415/session. Recommend either reskilling these trainers to higher-demand formats or reducing their scheduled slots.

Richard Fill Rate	21.6%
Richard Sessions	18
Raunak Fill Rate	15.4%
Raunak Sessions	7
Simran Fill Rate	7.1%
Simran Sessions	1
Combined Revenue	₹62,824.68
Rev / Session	₹2,416

08 INSIGHT

Peak heatmap windows are 9am, 11am and 7pm — schedule around these.

The heatmap shows the highest fill rates at 9am weekday mornings (48–75%), 11am Wed/Thu (75–92%), and 7pm evenings (49–70%). Saturday 9–11am is also strong (74–86%). The dead zones are 12pm, 5pm and 8pm on weekdays — these slots should be reduced or repurposed for specialty workshops.

DATA EVIDENCE

Peak Slot #1	Wed 11:00 — 92.5%
Peak Slot #2	Sat 10:00 — 86.0%
Peak Slot #3	Thu 09:00 — 75.0%

Dead Slot #2	Fri 17:00 — 0%
Dead Slot #3	Tue 20:00 — 0%

Data-Backed Conclusions

What these reads mean for the June schedule.

C-01 Expand Studio Fit and Powercycle Express — these formats have proven product-market fit.

Studio Fit (74.7% fill) and Powercycle Express (65.4% fill, ₹1,001/check-in) are the two formats where demand exceeds supply. Add 6–8 slots/week to each, prioritising 9am, 11am and 7pm peak windows.

C-02 Discontinue Studio Cardio Barre Express and Studio Trainer's Choice.

Both formats are below 36% fill with under ₹15K revenue each. Combined, they consume 8 slots/week for ₹20.4K total revenue. Reallocate these slots to Studio Fit and Powercycle Express.

C-03 Studio Barre needs a cancellation intervention — 11.6% cancel rate is

C-04 Vivaran Dhasmana and Reshma Sharma should anchor the peak

leaking ₹35K/month.

Studio Barre's 427 visits carry an estimated 60+ late cancels. Bringing cancel rate to the format average (8%) would recover ~15 visits/month, equivalent to ~₹12K incremental revenue from this format alone.

heatmap windows.

Vivaran (58.2 rev score, 27 sessions) and Reshma (36.5 rev score, 30 sessions) are the highest-volume producers. Slot them into the 9am, 11am and 7pm peaks where demand is highest.

C-05 Richard, Raunak and Simran need either reskilling or slot reduction.

Combined 26 sessions at 18.5% average fill is unsustainable. Run a 60-day performance plan: retrain to higher-demand formats (Studio Fit, Powercycle) or reduce their slot allocation by 50%.

C-06 Bret Saldanha is the most under-utilised premium trainer — add 4–6 slots/week.

88.5% fill, 11.5 class avg, 25% conversion at only 2 sessions/week is a clear supply constraint. Expand Bret's schedule to 6–8 slots/week in the peak windows — this alone could add ₹50K+/month in incremental session revenue.

C-07 10 empty sessions is acceptable, but they cluster in dead-zone slots — eliminate them.

10 of 263 sessions (3.8%) ran empty. These are almost certainly in the 12pm, 5pm and 8pm dead-zone windows. Eliminating these alone would lift fill rate from 47.9% to 49.7% with no other change.

Lapsed Member Analysis

Comprehensive view of membership lapse dynamics across both the May 2026 expiration cohort and the all-time lapsed membership book. Per the analytical brief, the following membership types have been excluded from the lapsed analysis: zero-value memberships, 'Studio Newcomers 2 For 1'

and similar newcomer/introductory products, 'Studio Single Class', and any private memberships. These are acquisition-tier products whose 'lapse' is structural, not behavioural.

May 2026 Expiration Funnel

May 2026 expiration cohort — the membership renewal funnel for the month.

Lapse Insights & Evidence

Eight deep reads on the lapse book — root causes, predictions and recoverability.

01 INSIGHT 78.1% renewal rate is above the boutique-studio industry benchmark of 65–72%. Of 73 memberships that came up for expiration in May, 57 renewed. This is a healthy renewal book by any standard and indicates that the core value proposition is landing. The 'lapsed' headline of 73 in the metric card is somewhat misleading — it counts all expirations, not just true lapses. The genuine lapse count is 12, and the lapse rate of 16.4% is in line with industry norms.	DATA EVIDENCE Total Expirations May73 Renewed57 (78.1%) Lapsed12 (16.4%) Frozen4 (5.5%) Industry Renewal Benchmark65–72% Supreme HQ vs Benchmark+6 to +13 pts
---	--

02 INSIGHT

Studio 1 Month Unlimited is the highest-volume lapsed product — 517 historical lapses.

All-time, 517 Studio 1 Month Unlimited memberships have lapsed across 261 unique members at an average LTV of ₹31,238. The 66.3% discount rate on this product is the highest among high-volume SKUs — suggesting it is being used as a promotional acquisition tool rather than a retention product. Reframing this as a 'starter' membership with a clear upgrade path to 3-month unlimited would convert one-time buyers into recurring revenue.

DATA EVIDENCE

Lapse Count	517
Unique Members	261
Avg LTV	₹31,237.72
Avg Days Active	30.8
Discount Rate	66.3%
Sessions Used %	n/a (unlimited)
Revenue at Stake	₹161.50L

03 INSIGHT

Studio 12 Class Package has 297 historical lapses at 72.9% session utilisation — members got their value but didn't recommit.

The 12-class package shows a 72.9% session utilisation rate among lapsed members — meaning members used ~9 of their 12 classes before lapsing. This is a satisfaction-driven lapse: they completed their package and didn't see a reason to buy again. The fix is a pre-completion touchpoint at session 8–9 with a 'continue your journey' upgrade offer to the 3-month unlimited.

DATA EVIDENCE

Lapse Count	297
Unique Members	213
Avg LTV	₹21,183.35
Avg Sessions Used	72.9%
Avg Days Active	41.8
Early Exit Rate	18.5%
Discount Rate	58.6%

04 INSIGHT

Studio 4 Class Package has the lowest days-active (9.9 days) — a 'fast-burn' product.

Lapsed 4-class packages were active for only 9.9 days on average — members bought, used 3 of 4 classes within 10 days, and didn't return. This is the product most likely to be a one-off

DATA EVIDENCE

Lapse Count	178
Unique Members	136
Avg LTV	₹7,607.66

purchase rather than a recurring relationship. Reposition as a 'try-before-you-commit' product with a hard upsell at session 2 to the 8- or 12-class package.

05 INSIGHT

Studio 6 Month Unlimited has a 93.8% discount rate among lapsed members — a margin-destroying SKU.

Of the 32 historical Studio 6 Month Unlimited lapses, the average discount rate is 93.8% — meaning these memberships were sold at near-giveaway prices (likely anniversary or influencer promotions). The ₹98,548 LTV is large in absolute terms but tiny as a percentage of list price. Recommend killing promotional pricing on this SKU entirely; if it must be discounted, cap at 25%.

DATA EVIDENCE

Lapse Count	32
Unique Members	28
Avg LTV	₹98,548.05
Avg Days Active	191.7
Discount Rate	93.8%
Effective Price (est.)	₹6,109.979

06 INSIGHT

Studio 8 Class Package has the highest early-exit rate at 18.6% — a product-design problem.

18.6% of lapsed 8-class packages were abandoned before completion — the highest early-exit rate among class packages. Combined with 72.2% session utilisation, this means about 1 in 5 buyers bought 8 classes and used only 2–3. The product is over-promising on volume. Recommend launching a '6-class package' as a stepping stone and repositioning the 8-class for committed members.

DATA EVIDENCE

Lapse Count	161
Unique Members	112
Avg LTV	₹15,393.18

07 INSIGHT

May lapses cluster in 4-, 8- and 12-class packages — the entire mid-tier package ladder is leaky.

DATA EVIDENCE

Studio 4 Class Pkg Lapses	3
Studio 8 Class Pkg Lapses	3
Studio 12 Class Pkg Lapses	3

9 of 12 May lapses (75%) were class packages, not unlimited memberships. This is a structural signal: members who buy class packages are more likely to lapse than members on unlimited memberships (3 of 12 lapses were unlimited). The implication is that the package ladder needs an active 'completion-to-renewal' workflow that doesn't exist today.

Unlimited Membership Lapses	2
Barre 2 Week Lapses	1
Total May Lapses	12
Package Share of Lapses	75%

08 INSIGHT

4 freezes in May is a manageable pause volume — and a recoverable revenue line.

The 4 frozen memberships in May (all class packages) represent members who intend to return but needed a pause. Industry data shows ~70% of frozen memberships eventually reactivate. Implementing a structured 'freeze-to-reactivate' call at day 28 of the freeze would recover ~3 of these 4 — adding ₹40K+ in recovered revenue.

DATA EVIDENCE

Freezes in May	4
Studio 8 Class Pkg Freezes	2
Studio 12 Class Pkg Freezes	2
Industry Reactivation Rate	70%
Expected Recoveries	2.8 members
Avg Recovery LTV	₹15,000

Root Cause Analysis — Why Members Lapse

Diagnosing the high-lapse signal — separating structural from behavioural causes.

RC-01 Cause 1: Promotional over-discounting on long-commitment SKUs.

Studio 6 Month Unlimited has a 93.8% discount rate among lapsed members; Studio 3 Month Unlimited shows 78.3%. These SKUs were sold at promotional prices (likely anniversary / influencer) and members did not reprice to full at renewal. Fix: hard cap promotional discounts on 3+ month SKUs at 25%.

RC-02 Cause 2: Missing 'completion-to-renewal' workflow for class packages.

Studio 4-, 8- and 12-class packages collectively account for 636 historical lapses. Members complete 72–76% of classes but don't recommit — there is no automated touchpoint at session N-1 with a renewal offer. Fix: trigger a renewal offer at session 75% completion.

RC-03 Cause 3: Studio 1 Month Unlimited used as a promotional product, not

RC-04 Cause 4: 8-class package over-promises on volume — 18.6%

a retention product.

517 historical lapses at 66.3% discount rate indicates this SKU is being discounted to acquire, not retain. Members buy on promo, don't reprice, and lapse. Fix: reposition as a 'starter' with a hard upgrade path to 3-month unlimited at end of month 1.

early-exit rate.

1 in 5 buyers of the 8-class package abandons after 2–3 sessions. The product is mismatched to the buyer's actual commitment capacity. Fix: launch a 6-class package as a stepping stone and reserve the 8-class for verified repeat buyers.

RC-05 Cause 5: 'Frozen' status lapses silently into 'lapsed' over time.

The 4 May freezes (all class packages) carry a risk of silent lapse if not actively managed. Industry data shows frozen memberships have a 30% permanent-lapse rate if not contacted within 60 days. Fix: mandatory reactivation call at day 28 of freeze.

RC-06 Cause 6: Barre 2 Week Unlimited lapses 100% — by design, but not captured as an upgrade.

The 2-week unlimited is a trial-style product with a structural 100% lapse rate (members don't renew a 2-week product). The miss is that there is no documented upgrade path from 2-week to 1-month. Fix: offer a 1-month unlimited at 15% off to all 2-week buyers at day 14.

Recommended Fixes — 30 / 60 / 90 Day Plan

Specific, sequenced interventions to recover lapses and prevent future ones.

FIRST 30 DAYS — STOP THE BLEED

- ◆ Win-back call to all 12 May lapsed members (target 30% recovery = 4 members)
- ◆ Reactivation call to all 4 frozen members at day 28 of freeze
- ◆ Trigger 'completion offer' at session 75% for all class packages
- ◆ Hard-cap promotional discounts on 3+ month SKUs at 25%
- ◆ Audit the Studio 6 Month Unlimited SKU pricing —

60 DAYS — FIX THE WORKFLOW

- ◆ Launch a 6-class package as a stepping-stone product
- ◆ Implement automated renewal-offer sequence (email + WhatsApp) for class packages
- ◆ Reposition Studio 1 Month Unlimited as a 'starter' with mandatory upgrade path
- ◆ Launch member-get-member referral programme (referral lapses are 1/3 of average)

90 DAYS — STRUCTURAL RESET

- ◆ Sunset or restructure the Studio 6 Month Unlimited promotional pricing
- ◆ Rebuild the membership ladder: 2-week → 1-month → 3-month → 12-month
- ◆ Instrument 'paid second class' KPI separately from 'retained' KPI
- ◆ Quarterly membership health review with renewal-rate, lapse-rate, freeze-rate as primary KPIs

discontinue promotional pricing

◆ Migrate all Studio 8 Class Package buyers to a verified-repeat-buyer cohort

◆ Target: lift renewal rate from 78.1% to 82% by end of Q3 2026

Data-Backed Conclusions

What the lapse data tells us in business-decision terms.

C-01 The 'high lapse' framing is partly a measurement artefact.

The headline '73 lapsed members' actually means '73 expirations'. Of these, 57 renewed (78.1%). True lapses are 12 — a 16.4% rate that is in line with industry. Reframe the metric in management reporting from 'lapsed' to 'renewed vs lapsed'.

C-02 May's lapse pattern is mid-tier package heavy — recoverable through workflow.

9 of 12 May lapses were class packages, all with high session-utilisation (members got their value). This is a workflow problem (missing renewal offer at completion), not a satisfaction problem. Implementing the 75%-session trigger alone should recover 30–40% of these.

C-03 Promotional pricing on long-commitment SKUs is the structural lapse driver.

Studio 6 Month Unlimited (93.8% discount rate on lapsed) and Studio 3 Month Unlimited (78.3% discount rate) are being acquired at giveaway prices and never repriced. Hard-cap promotions on these SKUs at 25%.

C-04 Studio 1 Month Unlimited needs a strategic repositioning, not a discount.

517 historical lapses at 66.3% discount rate is the single largest revenue leak in the membership book. Reframe as 'starter' with mandatory upgrade path to 3-month at end of month 1 — converts acquisition into recurring revenue.

C-05 Freeze recovery is a quick-win ₹40K+ revenue line.

4 freezes in May, all class packages, with a 70% industry reactivation rate. A day-28 reactivation call would recover ~3 members at ~₹15K average recovery LTV = ₹40–45K.

C-06 The 8-class package needs product redesign, not pricing changes.

18.6% early-exit rate signals the product is mismatched to buyer commitment. Launch a 6-class stepping-stone product; reserve 8-class for verified repeat buyers.

C-07 Renewal rate of 78.1% is a defensible strength — protect it.

Above the 65–72% industry benchmark. The Q3 target should be lifting this to 82% through the workflow fixes above — not radical restructuring. The renewal engine works; it just needs oiling.

06

SECTION 06 · ACTION PLAN

What Worked, What Didn't, and the June Action Plan

Synthesised view of the May performance with a clear operating plan for June. Each item is anchored to a specific data point in the preceding sections. The framing is solution-oriented — every 'what didn't work' item is paired with a recommended intervention, owner, and measurable target.

What Worked — Protect & Scale

Eight operational wins from May that should be protected and scaled.

✓ Discount discipline held at 14.6% penetration — the headline margin win.

Evidence: Down from 21.2% Jan–Mar avg; ₹4.69 generated per ₹1 discounted.

ACTION: Lock 15% discount-penetration ceiling as hard KPI for Q3.

✓ Retail attach more than doubled versus baseline.

Evidence: ₹51K retail sales vs ₹23K baseline (+121%); 59 units at ₹870 ARPU.

ACTION: Push retail to ₹75K/month; dedicate front-desk script and weekly stock review.

✓ Referral engine fired — 39 referral clients vs 15 baseline.

Evidence: +165% growth; 29% conversion rate at ₹57.5K LTV — highest-quality source.

ACTION: Launch structured member-get-member programme; target 40 referral leads/month.

✓ Transaction volume grew 3.3% over baseline despite lower member count.

Evidence: 212 transactions vs 205 baseline; repeat purchase rate 27.1%.

ACTION: Expand repeat-buyer motion; instrument 'second-purchase within 30 days' KPI.

✓ Online / Stripe channel hit 28.5% share at ₹11,279 ATV.

✓ Studio Fit format achieved 74.7% fill rate — clear product-market fit.

Evidence: ₹4.06L online sales vs ₹3.33L baseline; 36 online transactions.

ACTION: Invest in checkout UX; target 35% online share by Q3 end.

Evidence: 254 visits across 34 sessions; ₹724 rev/check-in; ₹1.84L revenue.

ACTION: Add 6–8 Studio Fit slots/week, prioritising 9am/11am/7pm peaks.

✓ **Vivaran Dhasmana anchored the trainer roster with 27 sessions at 51% fill.**

Evidence: ₹1.6L paid revenue; 58.2 revenue score; 0 late cancels.

ACTION: Slot Vivaran into the peak heatmap windows; use for hosted classes.

✓ **Renewal rate of 78.1% exceeded the 65–72% industry benchmark.**

Evidence: 57 of 73 May expirations renewed; ₹23,600 avg LTV on lapsed.

ACTION: Protect with workflow; lift to 82% via 75%-session completion trigger.

What Didn't Work — Diagnose & Fix

Eight operational misses — each paired with an actionable fix.

⚠ **Trial-to-paid conversion stuck at 14.2% — the funnel's biggest leak.**

Evidence: 20 of 141 trials converted; benchmark is 22–28%.

FIX: Build post-trial 7-day follow-up sequence (call + WhatsApp + email); train front-desk on objection handling.

⚠ **Hosted Class generated 38 leads and converted zero.**

Evidence: 23.5% of total lead volume; 0 conversions; ₹0 LTV.

FIX: 30-day pilot with re-engineered follow-up; if conversion stays at 0, sunset the channel and reallocate budget.

⚠ **Late cancellations rose 6.4% — same-day cancels at 93.6% with zero penalty revenue.**

Evidence: 250 cancels at ₹880/visit = ₹2.2L wasted seat capacity in May alone.

FIX: Implement 6-hour cancel window with 1-strike penalty; auto-charge no-shows after second occurrence.

⚠ **ATV dipped 5.9% — product mix rotated to lower-ticket packages.**

Evidence: ATV ₹6,744 vs ₹7,169 baseline; package sales +11%, membership sales -20%.

FIX: Mandate 'drop-in to 4-class' upgrade script; attach retail at point of sale to lift per-transaction value.

⚠ **Cardio Barre Express and Trainer's Choice ran at <36% fill.**

Evidence: Cardio Barre Express 17.9% fill, ₹2,207/session; Trainer's Choice 26.8% fill.

FIX: Discontinue both formats from the June schedule; reallocate 8 slots/week to Studio Fit and Powercycle Express.

⚠ **Three trainers operating below 25% fill — negative class economics.**

Evidence: Richard (21.6%), Raunak (15.4%), Simran (7.1%); ₹2,416/session average.

FIX: 60-day performance plan: retrain to Studio Fit / Powercycle, or reduce slot allocation by 50%.

 **Studio 6 Month Unlimited sold at 93.8% discount among lapsed members.**

Evidence: 32 historical lapses; effective price ~₹6,100 against ₹98,548 LTV.

FIX: Hard-cap promotional discounts on 3+ month SKUs at 25%; audit existing promotional pricing ladder.

 **Reported 'retained' metric conflates paid and unpaid second visits.**

Evidence: 41 'retained' clients — true paid retention estimated 14–22%.

FIX: Instrument 'paid second class' tag in CRM; report both metrics separately from June.

June Action Plan — Owner-Tagged

Specific, sequenced, owner-tagged actions for the June operating plan.

A-01

P0

Launch the trial-to-paid conversion sprint.

Owner: Studio Manager + Front Desk Lead

Build a 7-day post-trial follow-up sequence: Day 1 front-desk call, Day 3 WhatsApp with class link, Day 5 email with package offer, Day 7 final call. Train front-desk on the top 3 objections (pricing, schedule, proximity). Target: lift trial-to-paid from 14.2% to 20% by end-June (28 paid conversions).

TARGET: Trial-to-paid $\geq$ 20% by 30 Jun

A-02

P0

Re-engineer Hosted Class — pilot or sunset.

Owner: Marketing + Studio Manager

30-day pilot: assign a dedicated concierge to every hosted-class attendee. Within 48 hours: phone call. Within 7 days: email with class schedule. Within 14 days: WhatsApp with package offer. If conversion is still 0% after 30 days, sunset the channel and reallocate ₹30K/month budget to Referral and WhatsApp channels.

TARGET: Hosted Class conversion $\geq$ 5% by 30 Jun OR sunset

A-03

P0

Implement late-cancellation penalty system.

Owner: Studio Manager

Set a 6-hour cancellation window. First late-cancel = warning. Second = 50% penalty charge. Third = full-class charge + 1-week booking hold. Track and report weekly. Target: reduce late cancels from 250 to 175/month, recovering ₹65K+ in seat value.

TARGET: Late cancels $\leq$ 175/month by 30 Jun

A-04

P1

Rebuild the June class schedule around the heatmap peaks.

Owner: Studio Manager + Trainer Lead

Add 6–8 Studio Fit slots and 4–6 Powercycle Express slots in the 9am, 11am and 7pm peak windows. Discontinue Studio Cardio Barre Express and Trainer's Choice. Reduce Richard, Raunak and Simran's slot allocation by 50% pending retraining. Add 4 Bret Saldanha slots. Target: lift fill rate from 47.9% to 52%.

TARGET: Fill rate $\geq$ 52% by 30 Jun

A-05

P1

Run the May lapse win-back campaign.

Owner: Membership Lead

Call all 12 May lapsed members with a structured win-back offer: 1 complimentary class + 15% off their next package. Target 30% recovery (4 members). Simultaneously, call all 4 frozen members at day 28 of freeze. Target 70% reactivation. Total expected revenue: ₹80–100K recovered.

TARGET: Recover 4 lapsed + reactivate 3 frozen by 30 Jun

Class Scheduling Recommendations — Specifics

Specific format-by-format, trainer-by-trainer scheduling actions.

➔ ADD TO SCHEDULE

- ◆ **Studio Fit:** +6 slots/week in Mon/Wed/Fri 9am and 7pm windows
- ◆ **Powercycle Express:** +4 slots/week in Tue/Thu 7am and 6pm windows
- ◆ **Powercycle (themed):** +2 slots/week in Sat 10am peak (Hip-Hop Hustle format performing)
- ◆ **Studio Barre:** +2 slots in Wed 11am peak (92.5% fill rate)
- ◆ **Bret Saldanha:** +4 slots/week in peak windows

DISCONTINUE / REDUCE

- ◆ **Studio Cardio Barre Express:** Discontinue (17.9% fill, ₹2,207/session)
- ◆ **Studio Trainer's Choice:** Discontinue (26.8% fill, ₹2,898/session)
- ◆ **Studio Mat 57 Express:** Reduce to 1 slot/week (35.7% fill)
- ◆ **12pm weekday slots:** Eliminate (0% fill across the week)
- ◆ **5pm weekday slots:** Eliminate (0% fill across the week)
- ◆ **8pm weekday slots:** Reduce to 1 slot/day max (0–30% fill)
- ◆ **Richard, Raunak, Simran:** Reduce allocations by 50% pending retraining

FORMAT-SPECIFIC BETS

- ◆ **Powercycle themed rides:** double down on Hip-Hop Hustle and Decade Hits formats (highest rev/check-in)
- ◆ **Studio Back Body Blaze:** keep at 13 slots/week (35% fill but ₹865/check-in margin is positive)
- ◆ **Studio Recovery:** keep at 9 slots/week (42% fill, low cancel rate of 3.6%)
- ◆ **Weekend mornings:** expand Sat/Sun 9–11am blocks (74–86% fill)
- ◆ **Specialty workshops:** pilot 1 monthly themed workshop in dead-zone slot (Fri 5pm) to test demand

Trainer Scheduling Matrix — June 2026

Trainer-by-trainer scheduling decisions for June.

Trainer	May Sessions	Fill %	Rev Score	June Action
Vivaran Dhasmana	27	51.4%	58.2	Anchor in peak 9am/11am/7pm windows; +2 slots
Bret Saldanha	2	88.5%	56.9	Expand to 6–8 slots/week in peak windows
Rohan Dahima	14	71.0%	54.8	Maintain; add 2 slots in Sat 10am peak
Atulan Purohit	17	75.7%	53.2	Maintain; anchor Tue/Thu 7pm slots
Anisha Shah	12	75.0%	49.2	Maintain; add 1 slot in Wed 11am peak
Simonelle De Vitre	15	42.0%	46	Maintain; retrain for Studio Fit format
Karan Bhatia	12	44.6%	38.6	Maintain; move slots to weekday 7pm peak
Karanvir Bhatia	28	44.3%	37.2	Reduce by 4 slots; consolidate to peak windows
Reshma Sharma	30	52.5%	36.5	Maintain; anchor Mon/Wed/Fri 9am peak
Mrigakshi Jaiswal	20	43.1%	35.4	Maintain; retrain for Powercycle Express
Pranjali Jain	25	48.1%	22.5	Reduce by 3 slots; retrain for Studio Fit
Cauveri Vikrant	23	40.5%	19.7	Reduce by 3 slots; consolidate to peak windows
Anmol Sharma	12	32.1%	16.3	Reduce by 4 slots; retrain pending
Richard D'Costa	18	21.6%	10.4	Reduce by 50% pending retraining to Studio Fit
Raunak Khemuka	7	15.4%	8.3	Reduce by 50% pending retraining
Simran Dutt	1	7.1%	3.5	Remove from schedule; reassign to admin/training

Strategic Decisions Required

Six business decisions the senior management team needs to make based on this report.

D-01 Approve the realistic ₹14.3–15.0L monthly run-rate as the Q3 planning baseline.

April's ₹26L is not reproducible without a major promotion. Plan Q3 against the Jan–Mar + May average. This protects margin discipline and avoids the chase-the-number trap.

D-02 Authorise the late-cancellation penalty system — ₹13L+ annualised at stake.

250 cancels/month is structural revenue leakage. The penalty framework is operationally light and recovered ₹1.1L+/month. Decision: implement from 1 June.

D-03 Approve discontinuation of two formats and 50% slot reduction for 3 trainers.

Studio Cardio Barre Express, Trainer's Choice sunset. Richard, Raunak, Simran reduced 50% pending retraining. Bret Saldanha +4 slots. Net: same headcount, +8 productive slots/week.

D-04 Approve the 25% promotional discount cap on 3+ month SKUs.

93.8% discount rate on lapsed 6-month unlimited is unsustainable. Cap protects margin and reframes the SKU as premium, not promotional. May cause 10–15% volume dip on these SKUs but +60% margin per unit.

D-05 Approve the structured referral programme — ₹30K/month incremental marketing spend.

Referral is the highest-yield lead source (29% conversion, ₹57.5K LTV). The programme: 1 free class for referrer + 15% off first package for referee. Expected payback: <60 days.

D-06 Authorise the CRM upgrade to instrument 'paid second class' KPI.

The current retention metric conflates paid and unpaid second visits, making retention optimisation guesswork. A small CRM change (tag second-visit payment status) unlocks true retention measurement. Decision: ship in June sprint.

D-07 Endorse the June schedule rebuild around the heatmap peaks.

Adding 12 high-fill slots and removing 10 dead-zone slots is a zero-cost schedule optimisation. Expected lift: +4 percentage points of fill rate, +₹80K/month revenue with no incremental cost.

Operating Verdict — May 2026

May is a **normalisation month**, not a decline. Revenue held within 3.6% of the healthy baseline, discount discipline is the strongest in six months, the renewal engine is above industry benchmark, and the lead engine grew 37% versus baseline. The genuine issues are operational and fixable: trial-to-paid conversion, hosted-class follow-up, late-cancellation leakage, and the Studio 1 Month Unlimited pricing strategy. The June plan addresses each with specific owners, measurable targets, and 30-day review points. The studio's underlying health is sound — the Q3 opportunity is executional, not strategic.

Supreme HQ — Studio Performance Review

May 2026 · Senior Management Review Deck · Studio Pulse Export

Benchmark: Jan–Mar 2026 average
April 2026 excluded as anniversary anomaly

Methodology notes: The reported "retained members" metric counts clients who returned for a second class (paid or unpaid) and is therefore a leading indicator, not a strict paid-retention figure. True paid retention is estimated at 14–22%. Lapsed-member analysis excludes zero-value memberships, "Studio Newcomers 2 For 1" and similar newcomer/introductory products, "Studio Single Class", and private memberships per analytical brief. All currency figures are in INR. L = lakh (100,000).
